Objective

DevOps Engineer experienced in Azure DevOps, Kubernetes, Docker, Linux, and CI/CD automation, with a strong focus on infrastructure management, application deployment, monitoring, and system reliability.

Experience

DevOps Engineer | **12th Wonder** | **Ongoing**

DevOps Responsibilities:

- Manage and maintain full CI/CD pipeline automation — from code commit to deployment — with zero manual intervention.
- Handle server infrastructure including Kubernetes clusters and Docker containerized workloads across multiple live production projects.
- Deploy, monitor, and troubleshoot applications running on Kubernetes and Docker environments.
- Integrated SonarQube into CI/CD pipelines for automated code quality scanning and static analysis on every build.

IT Support Responsibilities:

- Manage IT operations including system setup, connectivity, and troubleshooting for all employees.
- Enforce security policies — no admin access granted to employees; all system configurations and access are handled centrally.
- Connect and configure employee workstations, resolve hardware/software issues, and manage Rust ID-based authentication.
- Implementing LDAP-based centralized authentication with role-based access control (RBAC) via group policies to manage user permissions across enterprise tools

Monitoring Responsibilities:

- Monitor application uptime using Uptime Kuma — configured alerts and notifications for application downtime.
- Monitor server health using OneUptime — track CPU usage, disk space, and critical services; receive instant notifications when thresholds are breached.
- Proactively handle disk space alerts and service failures to ensure high availability across all environments.

Education

B.Tech in Electronics and Telecommunication Engineering

Yeshwantrao Chavan College of Engineering, Nagpur | CGPA: 7.6/10 |

Diploma in Electronics and Telecommunication Engineering

Government Polytechnic, Yavatmal | 83.24%

10th (SSC)

Maharashtra State Board | 87%

Skills

- DevOps: Azure Devops, AWS (EC2, S3, IAM, VPC, RDS, Lambda, CloudWatch), Terraform,
- Programming & Scripting: Java, Shell Scripting, Python
- Web Technologies: HTML, CSS, JavaScript
- Databases: MySQL, RDS, Postgres
- System Administration: Linux, Windows
- Monitoring & Logging: Uptime Kuma, OneUptime, Grafana, Prometheus, CloudWatch
- CI/CD & Automation: Azure Devops, Jenkins, GitHub Actions, GitLab CI/CD, Webhooks,
- Tools: Git, GitHub Copilot, ChatGPT, GitLab, Maven, Docker, Kubernetes

Projects

Automated DevOps and GitOps Pipeline for Containerized Applications on AWS

- Implemented an automated CI/CD and GitOps workflow to build, containerize, and deploy a frontend application on Kubernetes using GitHub Actions, Docker, AWS ECR, and ArgoCD.

Full-Stack Web Application Deployment on AWS (3-Tier Architecture)

- Developed and deployed a full-stack recharge-style web application on AWS using a secure 3-tier architecture. Built the frontend using HTML, CSS, and JavaScript, and implemented backend APIs with Python Flask.

Certifications

- Basics of Networking through Cisco Platform by Cisco Network Academy
- Generative AI: Introduction and Applications

Extra-Curricular Activities

- Head at Icon 23.0
- Actively participated in College Fest
